

marmox showerstone

Floor level shower base for vinyl or tile

Shower areas or wetrooms

Level Access Shower base for vinyl or tiles

The Marmox Showerstone is a high performance shower former base creating a sloped drainage area and integrated drain. It has been designed to be used beneath either tiles or vinyl flooring and because it cannot be compressed, it is suitable for even the smallest mosaic tiles. This rigid shower former is simple to install and because of its high strength it can simply be laid directly onto the floor joists providing that support is present around the drain.

- can lay direct to floor joists
- fully waterproof
- very strong
- vinyl or any sized tiles
- wheelchair access
- easy installation

Unique Features of the Showerstone

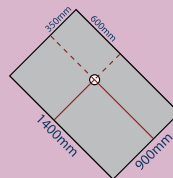

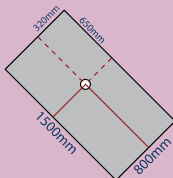

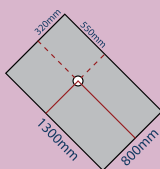

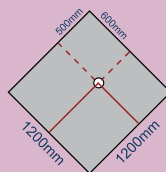

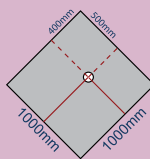

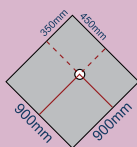

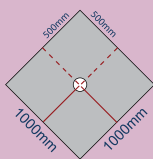

The Showerstone is available in a variety of different sizes, although all of them are 22mm thick at the outside edge. As typical timber flooring is 22mm thick, Showerstone easily and neatly replaces a section the floor when lowered onto the joists. It is made of a GRP/polymer concrete composite which makes it extremely strong allowing for wheelchair access. Although very strong, it is not brittle so can be easily cut to size if necessary. It is compatible with vinyl flooring adhesive, and for tiling a flexible cement-based tile adhesive should be used.

Centre drain sizes

size (mm)	perimeter (mm)	weight (kg)
1000 x 1000	22	26

Offset drain sizes

size (mm)	perimeter (mm)	weight (kg)
900 x 900	22	19
1000 x 1000	22	26
1200 x 1200	22	33
1300 x 800	22	25
1400 x 900	22	28
1500 x 800	22	30

Large tiles should be mitred from the corners of the Showerstone to the drain
